Utah's Vital Statistics

**Births and Deaths**

**2011**

Updated January 2013  
Technical Report No. 278

### **Mission Statement**

The Office of Vital Records and Statistics administers the statewide system of Vital Records and Statistics by documenting and certifying the facts of births, deaths, and family formation for the legal purposes of the citizens of Utah, participates in the National Vital Statistics System, and responds to the needs of health programs, health care providers, businesses, researchers, educational institutions and the Utah public for data and statistical information.

This publication was produced by:

# PREFACE

The 2011 edition of *Utah's Vital Statistics* is the 34th annual publication in this series. This report contains data on births and deaths received by the Office of Vital Records and Statistics, Utah Department of Health, for the year 2011. The primary purpose of this report is to make vital records data available for use by public health programs, health care providers, businesses, researchers, educational institutions, policymakers and the Utah public. It is our goal that these data will help drive decision-making in both the public and private health sectors in Utah and help policymakers understand how their actions impact health outcomes for all Utahns.

**Statistical & Technical Notes:** Data are reported at the state, county, and local health district level. The exception is Table A-23 which has birth and death data by community. Other data for cities and small areas can be found by accessing the Department of Health's IBIS website at [ibis.health.utah.gov](http://ibis.health.utah.gov).

The Summary and Reference sections are the two primary data resources in this report. The Reference section contains detailed birth and death data for 2011, and the Summary section before it contains populations, rates, and trend data. Following the Reference section are two Technical Appendices which provide technical notes on the sources, quality, and limitations of data, sample copies of the forms used for collecting vital records data, and Life Tables. The form for collecting birth information was new in 2009. The form for fetal death information was re-created to make the items easy to read, and users of this data can view the original fetal death form in the 2009 edition.

**Most Recent Change:** The Utah vital records birth questionnaire collects data in accordance with the 2003 U.S. Standard Certificate. The changes made to the questions asked of parents and health care providers impact the indices that are reported here. Most of the changes made were in the areas of prenatal care and socio-economic status of parents. Specifically, the Office of Vital Records & Statistics has discontinued asking the gestational month that prenatal visits began and mother's alcohol use during pregnancy.

Additionally, the way in which parents' education level and racial/ethnicity information is collected has changed. The previous questionnaire simply asked parents to provide their years of schooling. A parent could indicate 15 years of education under the old system, but OVRs could not infer if that parent had an associate's degree or simply two years of education beyond high school. The new question asks about degree of attainment rather than years of schooling. Parents are now asked what degree(s) they hold. Furthermore, the racial/ethnicity change allows parents to indicate a multi-race heritage. We report a single race for statistical purposes. Multiple race coding can be obtained from our office.

**Electronic Access:** This report is available as a PDF document on the Office of Vital Records & Statistics website at [vitalrecords.health.utah.gov](http://vitalrecords.health.utah.gov). To request data files in alternate formats, please contact the Office of Vital Records and Statistics by phone at (801) 538-6843 or by email at [cmrobison@utah.gov](mailto:cmrobison@utah.gov).

**Suggestions and Comments:** Users of *Utah's Vital Statistics* are encouraged to contact the Office of Vital Records and Statistics with suggestions to improve future editions. These comments should be sent to:

Rates for births, deaths, marriages, and divorces are per 1,000 population.

Rates for natural increase are birth rates minus death rates.

Rates for infant mortality and ratios for spontaneous fetal deaths are per 1,000 live births.

Population and vital records data are updated in summary tables each year and may not agree with prior reports in this series.

Weber	233,241	4,008	17.2	1,589	6.8	763.39	34	8.5	35	8.7	269	67.1

Crude rates for births and deaths for 2011 are per 1,000 population based on the population estimate number 2,813,923.

Crude rates for births and deaths for 2010 are per 1,000 population based on the population estimate number 2,774,663.

Age-adjusted rates for deaths for 2011 are per 1,000,000 population based on the population number 2,817,222.

Age-adjusted rates for deaths for 2010 are per 1,000,000 population based on the population number 2,775,479.

\*Use caution in interpreting, the estimate for age-adjusted death rates has a relative standard error greater than 30% and does not meet UDOH standards for reliability. Consider aggregating years to decrease the relative standard error and improve the reliability of the estimate. Rates for infant mortality, ratios for fetal deaths, and rates for abortions are per 1,000 live births.

Rates are not computed for fewer than seven events.

Salt Lake	807.37	1,045,829	1295.4

Frontier counties are six or fewer persons per square mile.

Rural counties are more than six but less than 100 persons per square mile.

Urban counties are one hundred or more persons per square mile.

Definitions for population densities for frontier, rural and urban areas are defined by the Office of Vital Records and Statistics, Utah Department of Health.

**Table 7. Population, births and deaths by land area of residence: Utah, 2011**

Land Areas	Estimated population July 1, 2011	Births		Deaths		Age- adjusted rate
		Number	Rate	Number	Rate	
Total	2,813,923	51,144	18.2	15,156	5.4	694.49
Frontier	103,947	1,695	16.3	794	7.6	767.01
Rural	587,514	10,012	17.0	3,552	6.0	678.97
Urban	2,122,462	39,437	18.6	10,810	5.1	697.25

Rates for births are per 1,000 population.

Crude rates for deaths are per 1,000 population.

Age-adjusted rates for deaths are per 100,000 population.

Frontier counties are six or fewer persons per square mile.

Rural counties are more than six but less than 100 persons per square mile.

Urban counties are one hundred or more persons per square mile.

Definitions for population densities for frontier, rural, and urban areas are defined by the Office of Vital Records and Statistics, Utah Department of Health.

Sources for population for crude birth and death rates and for age-adjusted death rates for 2011 are referenced in the footnotes for Table 6.

**Table 8. Infant mortality total, neonatal and post-neonatal by land area of residence: Utah, 2011**

Land Areas	Total		Neonatal deaths (0-27 days)		Post neonatal deaths (28-364 days)	
	Number	Rate	Number	Rate	Number	Rate
Total	282	5.5	185	3.6	97	1.9
Frontier	12	7.1	5	--	7	4.1
Rural	54	5.4	32	3.2	22	2.2
Urban	216	5.5	148	3.8	68	1.7

Rates for infant deaths, neonatal, and post-neonatal deaths are per 1,000 live births.

Frontier counties are six or fewer persons per square mile.

Rural counties are more than six but less than 100 persons per square mile.

Urban counties are one hundred or more persons per square mile.

Definitions for population densities for frontier, rural, and urban areas are defined by the Office of Vital Records and Statistics, Utah Department of Health.

**Table 9. Fetal deaths, low-weight births, births to unmarried mothers and abortions by land area of residence: Utah, 2011**

Land Areas	Fetal deaths		Low birthweight <2,500 grams		Unmarried mothers		Induced abortions	
	Number	Ratio	Number	Rate	Number	Rate	Number	Rate
Total	278	5.4	3,546	69.3	9,583	187.4	3,081	60.2
Frontier	8	4.7	125	73.7	465	274.3	32	18.9
Rural	58	5.8	685	68.4	1,846	184.4	346	34.6
Urban	212	5.4	2,736	69.4	7,272	184.4	2,703	68.5

Ratios for fetal deaths and rates for low birthweight, unmarried mothers, and induced abortions are per 1,000 live births.

Frontier counties are six or fewer persons per square mile.

Rural counties are more than six but less than 100 persons per square mile.

Urban counties are one hundred or more persons per square mile.

Definitions for population densities for frontier, rural, and urban areas are defined by the Office of Vital Records and Statistics, Utah Department of Health.

General fertility rates are number of live births per 1,000 females 15-44 years of age.

General fertility rates prior to 1980 are tabulated by race of child.

Population and vital records data are updated in summary tables each year and may not agree with prior reports in this series.

Births are tabulated by race of mother beginning in data year 1990. Previous years are tabulated by race of child.

Low birthweight is defined, effective January 1, 1979, as "less than 2,500 grams" (or 5 pounds 8 ounces). This definition was changed in the ninth revision of the International Classification of Disease (ICD-9), 1978.

Crude rates for deaths for 2011 are per 1,000 population based on the population estimate number 2,813,923.

Crude rates for deaths for 2010 are per 1,000 population based on the population estimate number 2,774,663.

Age-adjusted rates for deaths for 2011 are per 1,000,000 population based on the population number 2,817,222.

Age-adjusted rates for deaths for 2010 are per 1,000,000 population based on the population number 2,775,479.

The Utah population for age-adjusted rates is based on the mid-year total population and is grouped by age and recalculated.

Working years are defined as ages 15 to 65.

Working years of life lost are calculated by computing the number of years between age at time of death and 65 with no accounting for years before age 15. For example, if a person dies at age 5, working years of life lost would be 50 years.

Years of life lost is computed from the decennial life table 2000 for Utah.

Sex not stated is included in male.

Ages not stated are not included.

**Table 20: Infant mortality rates by age at death, residents: Utah, 1970, 1975 and 1980-2011**

Year	Total Infant mortality rate	Infant mortality rate at age of death			
		Under 1 day	1-6 days	1-4 weeks	1-11 months
1970	15.0	5.6	4.5	1.0	3.9

This table compares Utah final data with U.S. provisional death data.

Crude rates for births and deaths for 2011 are per 1,000 population based on the population estimate number 2,813,923.

Crude rates for births and deaths for 2010 are per 1,000 population based on the population estimate number 2,774,663.

Age-adjusted rates for deaths for 2011 are per 1,000,000 population based on the population number 2,817,222.

Age-adjusted rates for deaths for 2010 are per 1,000,000 population based on the population number 2,775,479.

The Utah population for age-adjusted rates is based on the mid-year total population and is grouped by age and recalculated.

\*Use caution in interpreting, the estimate for age-adjusted death rates has a relative standard error greater than 30% and does not meet UDOH standards for reliability. Consider aggregating years to decrease the relative standard error and improve the reliability of the estimate.

Source for Utah population data for crude birth and death rates for 2010-2011: Utah Population Estimates Committee (UPEC) and the Governor's Office of Planning and Budget (GOPB); Table: Utah Population Estimates by County; July 2011.

Rates for pregnancies include live births, fetal deaths, and abortions and are per 1,000 female age-group population.

Rates for pregnancies for the age group under 15 are based on the population age group 10-14.

Pregnancies in this report are defined as the total of births, fetal deaths of 20 weeks or more gestation, and induced abortions.

Spontaneous terminations at less than 20 weeks gestation are excluded, as they are not reportable vital events.

Population and vital records data are updated in summary tables each year and may not agree with prior reports in this series.

*2011 Appendix A: Technical Notes*

## **Births and Deaths**

## APPENDIX A: TECHNICAL NOTES

### Vital Statistics Registration in Utah

Centralized vital statistics registration for the State of Utah was first established by an act of the Utah Legislature in 1905. Sections 26-2-1 through 26-2-28, Utah Code Annotated, 1953 as amended, provide the current statutory authority<sup>1</sup>.

#### Section 26-2-3

(1) The department shall:

- (a) provide offices properly equipped for the preservation of vital records made or received under this chapter;
- (b) establish a statewide vital records system for the registration, collection, preservation, amendment, and certification of vital records and other similar documents required by this chapter and activities related to them, including the tabulation, analysis, and publication of vital statistics;
- (c) prescribe forms for certificates, certification, reports, and other documents and records necessary to establish and maintain a statewide system of vital records;
- (d) prepare an annual compilation, analysis, and publication of statistics derived from vital records; and
- (e) appoint a state registrar to direct the statewide system of vital records.

(2) The department may:

- (a) divide the state from time to time into registration districts; and
- (b) appoint local registrars for registration districts who, under the direction and supervision of the state registrar, shall perform all duties required by them by this chapter and department rules.

Under Utah statutes, full-time health officers of local health departments become ex-officio local registrars and are responsible for the registration of certificates for all deaths that occur within their respective jurisdictions. Figure A-1 is a list of local health departments, registrars and deputy registrars. Each of the twelve local health departments resides over a local health district.

The local health districts (also referred to as "districts" in this report) and respective counties are Bear River (Box Elder, Cache and Rich), Central Utah (Juab, Millard, Piute, Sanpete, Sevier and Wayne), Davis, Salt Lake, Southeastern (Carbon, Emery, Grand and San Juan), Southwest (Beaver, Garfield, Iron, Kane and Washington), Summit, Tooele, TriCounty (Daggett, Duchesne, and Uintah), Utah, Wasatch, and Weber-Morgan (Morgan and Weber). Figure A-2 is a Utah map which shows the county boundaries.

### Source of Data

Vital statistics certificates filed with the state Office of Vital Records and Statistics are the primary source of data presented within this report. These records include certificates of live birth, death and fetal death. Source data of official population estimates for the state are provided by the Governor's Office of Planning and Budget.

### Forms for Certificates

Utah's certificates of live birth, death and fetal death are revised periodically to include items on the recommended national "Standard Certificates," with modifications and additions to meet particular needs in Utah. Figures A-3 through A-6 are forms that contain the current data collected for each live birth, death and fetal death record.

### Quality and Limitations of Data

Limitations of the data must be recognized before valid interpretation is possible. For vital statistics data, these limitations are related to the difficulties in reporting and classifying information and to some under-registration of events. It is necessary to exercise particular caution when evaluating vital statistics trend data, since medical concepts, code definitions and method of assigning causes of death have changed over the years. There was a major change in the death coding system for data year 1999 when ICD-10 was implemented.

## Local Health Districts, Registrars and Deputy Registrars

### **Bear River District**

655 East 1300 North  
Logan, Utah 84341

Registrar: Lloyd C. Berentzen  
Acting Deputy Registrar: Ivonne Kruse

### **Central Utah District**

70 Westview Drive  
Richfield, Utah 84701

Registrar: Bruce Costa  
Deputy Registrar: Dixie Sorensen

### **Davis County**

22 South State Street  
Clearfield, Utah 84015

Registrar: Lewis R. Garrett  
Deputy Registrar: Karla Smith

### **Salt Lake Valley Health Dept.**

610 South 200 East  
Salt Lake City, Utah 84111

Registrar: Gary L. Edwards  
Acting Deputy Registrar: Nancy Hahn

## Registration of Births and Fetal Deaths

The completeness of registration for births was last tested at the state level in conjunction with the 1950 U.S. Census of the Population and was found to be 98.7 percent complete at that time. At the present time, more than 99 percent of all Utah's resident births occur in hospitals. This fact, coupled with information from sample studies, indicates that the completeness of birth certificate registration now exceeds 99 percent.

The registration of fetal deaths at 20 weeks or more gestation is required by statute. Since May 1981, the institution where the delivery occurs has the responsibility for filing a fetal death certificate when delivery results in a fetal death. Fetal death certificates are to be registered by the fifth day after the delivery and before disposition of the remains.

Most deliveries (99%) occur in hospitals and women who miscarry unexpectedly at 20 weeks or more are usually taken to a hospital if they are not already there. Funeral directors are responsible for checking that a fetal death certificate has been filed for all such dispositions they handle.

## Limitation of Small Numbers

All statistics are subject to chance variation. Such random variation in a large number of events has little effect on the data for the group; however, random variation in a small number of events may result in a startling change in the data for the group. For example, minor differences in the number of births or deaths in small populations or in the number of deaths from uncommon causes may result in large changes in these rates. Rates for areas of small population or for events with few occurrences should be interpreted with this limitation in mind.

## Cause of Death

Cause of death statistics are derived from the medical certification information required by law to be reported on the death or fetal death certificate by the attending physician or medical examiner. The medical certification item on certificates of death and fetal death has a provision for reporting three causes of death--immediate, intervening, and underlying, plus additional information related to the cause of death.

The cause of death selected for coding and tabulating mortality statistics is the "underlying cause of death," which is generally defined as the disease or injury which initiated the sequence of morbid events leading directly to death.

Occasionally death certificates are registered with the cause of death information incomplete, inconsistent, or equivocal, and additional information from the Center for Disease Control is not available. In such cases, selection and modification rules are used to select the underlying cause of death for statistical purposes. Selection and modification rules which adapt the coding procedures to reporting practices in the United States are published by the Public Health Service, National Center for Health Statistics, in annual editions of the Vital Statistics Instructional Manual.

The Eighth Revision of the International Classification of Diseases was used to code the underlying cause of death on Utah's death certificates for data years 1968 through 1978. The Ninth Revision of the International Classification of Diseases was used to code the underlying cause of death in Utah for data years 1979-1998, and the current Tenth Revision was used to code the 1999-2007 data in this report.

Comparability ratios between revisions are computed by the National Center for Health Statistics and are published in Utah's Vital Statistics: Births and Deaths, 1980 for the earlier revision and can be found on our website as described in the preface of this publication for the new and current version. Comparability ratios for some cause of death codes show extreme variations and utmost caution should be taken in interpreting any cause of death trends that span the Eighth and Ninth Revisions<sup>2</sup> or the Ninth and Tenth Revisions<sup>3</sup> of the International Classification of Diseases.

### Geographic Bases

Birth and death data can be presented by place of occurrence of the event or by place of usual residence of the individual. For deaths, "place of residence" for the decedent is defined as the usual residence of the decedent. For births, "place of residence" for the child is defined as the usual residence of the mother.

Reallocation of birth and death certificates to the state of residence has been virtually complete on a nationwide basis since 1955. This is made possible by a cooperative program among the states for exchange of copies of certificates of non-resident events for statistical purposes only.

For analytical purposes, sometimes it is meaningful to tabulate accidental deaths by place of occurrence rather than by place of residence. Statistical tabulations of accidental deaths "by place of occurrence" refer to the place where the death occurred, and not the place where the accident occurred. A hypothetical example may help to clarify the above explanation. Assume that a resident of Denver, Colorado is involved in a motor vehicle accident in Wendover, Nevada and requires emergency aid of a special nature. The closest available facility is the Mountain West Medical Center in Tooele, Utah. After arriving at the hospital, the patient succumbs to conditions arising from the accident. In such cases, the "place of occurrence" of the death for statistical purposes would be Tooele, Utah, not Wendover, Nevada; however, there can also be a table of accidental deaths by place where the accident occurred. In this example, the death would be classified as an accidental death to a non-resident which occurred in Utah. The place where the accident occurred would be out-of-state (Wendover, Nevada).

### Race/Ethnic Origin

The Utah Department of Health began tabulating birth data by race of mother in the 1990 data year. Prior to 1990, birth data were tabulated by race of infant.

This change corresponds to the 1989 revision of the Utah birth certificate. Caution should be used when comparing the racial classification of birth data prior to 1990 with data collected in 1990 and later. An explanation of the factors that brought about the racial classification change of birth data and the problems of analyzing the trend data are available in Utah's Vital Statistics Annual Report: 1990.
